Power supply

Two-wire technology, polarity safe; power supply lines = signal lines

Note
Following calculations apply for standard applications. This should be taken into consideration when working with a higher maximum current.

Power supply – HART®

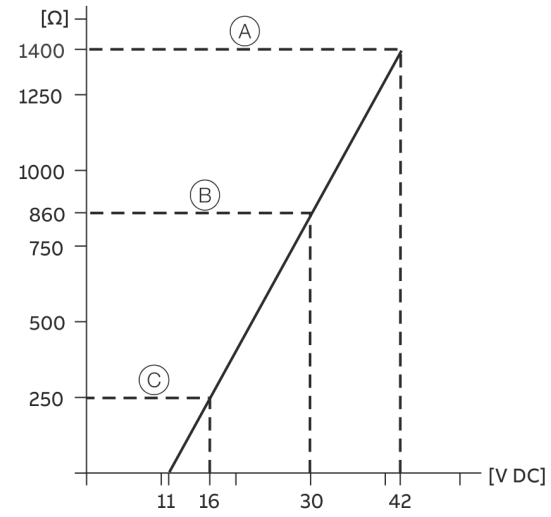
Input terminal voltage
- Non-Ex application:
  U_S = 11 to 42 V DC
- Ex applications:
  U_S = 11 to 30 V DC

Maximum permissible residual ripple for input terminal voltage
During communication this complies with the HART FSK 'Physical Layer' specification.

Undervoltage detection on the transmitter
If the terminal voltage on the transmitter down-scales a value of 10 V, this may lead to an output current of $I_a \leq 3.6$ mA.

Maximum load

R_B = (supply voltage – 11 V) / 0.022 A



Ⓐ TTH300
Ⓑ TTH300 in Ex-applications
Ⓒ HART communication resistance

Figure 2: Maximum load depending on input terminal voltage

Maximum power

$P = U_s \times 0.022$ A

E. G.: U_s = 24 V → P_{max} = 0.528 W

Power supply – PROFIBUS® / FOUNDATION Fieldbus®

Input terminal voltage
- Non-Ex application:

  U_S = 9 to 32 V DC
- Ex-applications:

  U_S = 9 to 17,5 V DC (FISCO)

  U_S = 9 to 24 V DC (Fieldbus Entity model I.S.)

Current consumption

≤ 12 mA

MID Certification

TTH300 with MID Certification

The temperature transmitter TTH300 is certified by an MID Parts Certificate in accordance with the Measuring Instruments Directive 2014/32/EU (MID) and the standard WELMEC 7.2. The device with the appropriate configuration is therefore approved for 'Custody Transfer' measurements (fiscal metering).
The MID certification emphasizes the high accuracy, reliability and durability of the TTH300.

Note
This chapter provides basic information on the MID-certified transmitter TTH300. Before commissioning the device, full information should be consulted in the supplied MID documents (Parts Certificate and associated 'Description'). Any generally applicable statements on the transmitter TTH300, especially pertaining to explosion protection and device safety, remain unaffected.

General
Devices with MID certification have their own EU declaration of conformity. In addition to the declaration, the 'Parts Certificate' and the associated 'Description' are enclosed with the device.
It is compulsory and imperative that the described areas of application, requirements and restrictions are complied with for the intended use of the device!

The requirements of explosion protection and functional safety (SIL) remain unaffected by the MID certification.

The number of the partial certificate (TC11002) of the notified body NMi Certin B.V. and the checksum (0x46c9) of the certified SW revision 01.03.00 are printed on the name plate of the device.

Areas of application, conditions and requirements
The temperature transmitter TTH300 with MID certification for custody transfer measurements is especially suited for measurement and control systems in the oil and gas industry. In addition to gas, any liquids except for water are permitted for measurement.

The MID certification refers to a special configuration of the transmitter. This must not be modified! An extract of the conditions and requirements stated in the certificate follows below:

- Communication protocol: HART 5, HART 7
- HW revision: 1.07
- SW revision: 01.03.00 with checksum 0x46c9
- The checksum of the software (firmware) is printed on the name plate of the device
- On sensor Pt100 in a four-wire circuit
- Permissible measuring range:
  −50 to 150 °C (−58 to 302 °F)
- Ambient temperature range without LCD indicator:
  −40 to 85 °C (−40 to 185 °F)

Note
- Based on the MID certificate, an operation of the TTH300 with the connected LCD indicator is not permitted.
- The MID certification can generally be combined with all certifications of explosion protection.
  The ambient temperature and measuring range named in the corresponding explosion protection certificate, however, limit the ranges permitted in the MID certificate.

Note
The HW write protection on the device should be activated after installation and configuration. The housing cover should be secured and the device housing sealed using the supplied seal.
