Use of imperatives in HART Specifications

The key words (imperatives) "must", "required", "shall", "should", "recommended", "may", and "optional" when used in this document are to be interpreted as follows:

- | | |
|---------------|--|
| Must | Must, Shall, or Required denotes an absolute mandatory requirement. For example, "All HART Field Devices must implement all Universal Commands" |
| Should | Should or Recommended indicates a requirement that, given good cause/reason, can be ignored. However, the consequences of ignoring the requirement must be fully understood and well justified before doing so. |
| May | May or Optional identifies a requirement that is completely optional and can be supported at the discretion of the implementation. May can be used to identify optional Host Application or <u>Client</u> functionality and, when this is the case, does not imply the function is optional in Field Devices. |

Intellectual Property Rights

The FieldComm Group does not knowingly use or incorporate any information or data into the HART Specifications which the FieldComm Group does not own or have lawful rights to use. Should the FieldComm Group receive any notification regarding the existence of any conflicting Private IPR, the FieldComm Group will review the disclosure and either (a) determine there is no conflict; (b) resolve the conflict with the IPR owner; or (c) modify this specification to remove the conflicting requirement. In no case does the FieldComm Group encourage implementers to infringe on any individual's or organization's IPR.
