# Table of Contents

1. Introduction ................................................................................................................................................................................................. 1  
   1.1 Scope .................................................................................................................................................................................................. 1  
   1.2 Overview ................................................................................................................................................................................................. 1  

2. Transducer Blocks for HART®....................................................................................................................................................................... 2  
   2.1 Transducer Block for Wired HART® and WirelessHART™ Device .............................................................................................................. 2  
      2.1.1 Description ...................................................................................................................................................................................... 2  
      2.1.2 Supported Modes ........................................................................................................................................................................... 2  
      2.1.3 Block Access .................................................................................................................................................................................. 3  
   2.2 Transducer Block for HART® Gateway ................................................................................................................................................... 4  
      2.2.1 Description ...................................................................................................................................................................................... 4  
      2.2.2 Supported Modes ........................................................................................................................................................................... 4  
      2.2.3 Block Access .................................................................................................................................................................................. 4  

3. Data Type ..................................................................................................................................................................................................... 5  
   3.1 Enumeration definition for HART_DIAG_MAP ....................................................................................................................................... 5  
   3.2 Parameter Attribute Definitions ............................................................................................................................................................. 11  
   3.3 Parameter Descriptions and Values ..................................................................................................................................................... 12  
      3.3.1 Parameter Descriptions ................................................................................................................................................................ 12  
      3.3.2 HART_DIAG_MAP initial Value .................................................................................................................................................... 13  

4. HART Gateway Function .......................................................................................................................................................................... 15  
   4.1 Scanning HART Input Process Values ................................................................................................................................................. 15  
   4.2 Scanning HART Input Parametric Values ........................................................................................................................................... 15  
   4.3 Processing Fieldbus Foundation Output Values to HART .................................................................................................................... 16  
   4.4 Processing HART Diagnostic Indications & Alerts ............................................................................................................................ 16  
   4.5 Expected Host Relationships ................................................................................................................................................................ 16  
      4.5.1 Asset Managing Host for Wired and WirelessHART™ Devices .................................................................................................... 16  
      4.5.2 Operational Host ........................................................................................................................................................................... 17
